SmartEntry: Advanced visitor management system

By: Chantal Pande

RWD

Introduction

Background:

- Visitor management is essential for organizational security.
- Reliance on paper-based systems.
- Inefficient and difficult management with manual processes.
- The need for secure and intelligent digital solutions.

Problem statement

Current challenges:

- Difficulty when tracking visitors.
- Poor visitor history management.
- Limited reporting.
- Lack in means to identify suspicious visitors across organizations.

Project objectives

Main objectives:

Develop an advanced visitor management system that improves visitor tracking while enhancing organizational security.

Specific objectives:

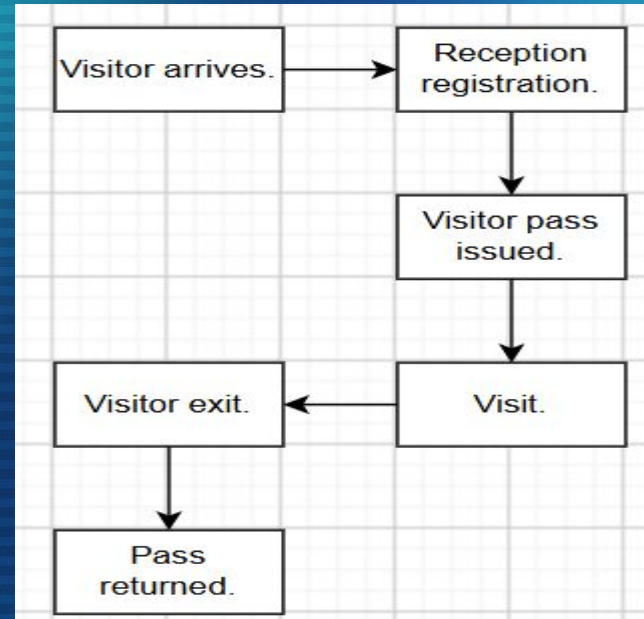

- Improve visitor tracking
- Generate visitor reports
- Enable incident reporting
- Share anonymized security intelligence
- Protect visitor privacy

Part 1: Visitor management system

Core features

- Security/reception login.
- Visitor registration.
- Visitor pass issuance.
- Time-in/Time-out logging.
- Visitor search.
- Host search.
- Visitor history.
- Host notifications.

Simple workflow

Visitor information captured

Registration details

1. Name.
2. National ID.
3. Phone number.
4. Host.
5. Laptop registration(if applicable).

Benefits

1. Accurate records.
2. Faster check-in.
3. Better tracking.
4. Reduced paperwork.

Part 2: Advanced intelligence

Why add?

1. Traditional systems only record visitors.
2. It helps organizations detect security threats.
3. The incident types:
 - a. Fake identification.
 - b. Unauthorized access.
 - c. Theft.
 - d. Misconduct.
 - e. Blacklisted visitors.

Shared intelligence network

Information shared:

- Incident category.
- Date.
- Organization ID.
- Risk level.

Privacy Protection:

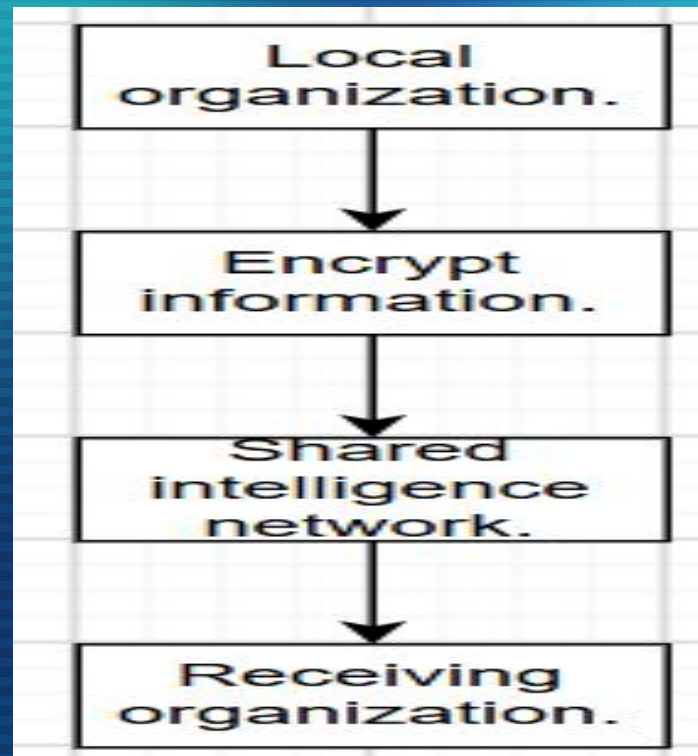

Instead of sharing personal information directly, organizations share encrypted security alerts.

Security and privacy

Simple workflow

Data protection

- AES-256 encryption.
- SHA-3 Hashing.
- TLS 1.3.
- Zero knowledge model.

PLAY

System features

Incident reporting

- Select incident type.
- Add description.
- Submit report.

Dashboard

- Risk indicators.
- Incident count.
- Security alerts.

Reports

- Daily visitors.
- Frequent visitors.
- Incident reports.

Technical architecture

Frontend	HTML, CSS, JavaScript, Bootstrap, Axios, SweetAlert2.
Backend	Django(Python).
Database	PostgreSQL.
Authentication	Django authentication.
Version control	Git and GitHub.

PLAY

Existing solutions

Current systems

1. Vizitor.
2. Soja.
3. GuestPass

Limitations

These systems support visitor management but do not provide:

- Shared incident intelligence.
- Privacy-preserving security alerts.

Expected outcomes

- Reduced paper waste.
- Improved visitor tracking.
- Enhanced organizational security.
- Better reporting.
- Privacy-preserving intelligence sharing.
- Faster security response.

Conclusion

SmartEntry:

An intelligent visitor management system that combines;

- Digital visitor management.
- Incident reporting.
- Shared intelligence.
- Privacy protection.

Result:

A secure efficient and modern visitor management solution.
